

Axiom Short Duration Bond

Investment objective

The fund's investment policy is to select bonds, debt securities or preferred shares. The duration of the fund is less than 2.

The investment strategy is based on a carry trade which means it aims to invest in bonds offering high coupons and low volatility.

The fund is actively managed and is not managed according to a benchmark.

The SRRI represents the annual historical volatility of the Fund over a 5-year period. Historical data such as that used to calculate the synthetic indicator cannot be considered as a reliable indication of the Fund's future risk profile. The risk category associated with the Fund is not guaranteed and may change over time. The lowest risk category does not mean "risk free". Your initial investment is not guaranteed.

¹ Yield to perpetuity of the portfolio, excluding cash, all currencies combined. The yield to perpetuity is the yield of the portfolio with the hypothesis that securities are not reimbursed and kept to perpetuity ² Performance since the date the fund is UCITS. The fund was created on 14/08/2015 but the regulations do not allow us to report on performance before the 16th of May 2016 date when the fund became UCITS compliant. ³ Annualized performance. ⁴ Performance

MONTHLY COMMENTARY

ADRIAN PATURLE
Portfolio Manager

The financial markets sold off in November as investors turned to a risk-off mood following rising cases of Covid in Europe and the discovery of a new variant of concern. Investors had already started to be doubtful during the month, with increasing inflation figures and central banks continuing to procrastinate on the adaptation of their monetary policy.

At the end of the month, the FED clearly positioned itself for an acceleration of the tapering process leading to a rise in its key rates from 2022. The same movement should be followed quickly in England and certainly later in Europe. Against this backdrop, the SubFin Itraxx index deviated from 113 at the start of the month to 130 as of November 30.

The credibility of the major central banks to fight against possible non-transitory inflation has not, for the moment, been damaged. A classic 'flight to quality' movement has therefore taken place with a drop in long-term rates (between 20 and 30bps over the month). The fund did not benefit from this dip to compensate for the under-performance of the credit segment due to its short duration position. At this level, we still believe that risk remains asymmetric.

The fund benefited from this market weakness at the end of the month by increasing its exposure to a few bonds, notably the 6.5% Legacy AT1 bond from Credit Suisse at 350bps of spreads or the bucket of US preferred shares.

RISKS

Significant risk(s) for the Fund not taken into account in the SRRI indicator include the following:

Credit risk: Investors are exposed to the risk of defaults on the bonds included in the portfolio. This risk may affect up to 100% of the portfolio. The materialisation of this risk may lead to a fall in the Fund's net asset value.

Counterparty risk: The Fund may suffer losses as a result of a counterparty failing to meet its contractual obligations.

Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices. This can be the result of shocks of unprecedented intensity and severity such as but not limited to pandemics and natural disasters.

For more information on risks, please refer to the prospectus of the Funds.
