### Market commentary

After the optimism seen earlier this year, the bond markets turned down in February. The economic indicators proved central bankers right against the market consensus: inflation persists, employment is at record levels, growth has surprised on the upside and there is no sign of recession for 2023. Accordingly, long maturity interest rates have risen again, causing financial assets to fall.

Thus, the French 10-year yield rose from 2.73% to 3.17% during the month and the US 10-year from 3.87% to 4%. Bund yields ended the month 40 bps higher at 2.63%, while Schatz yields reached 3.12%, their highest level since 2008. In contrast, credit spreads returned to their initial levels despite volatility during the month. The Main and Sub Fin remained stable at 79 bps and 155 bps respectively, the Xover tightened slightly from 414 bps to 413 bps and the Senior Fin ended the month at 88 bps. In this context, the primary market was subdued. However, of note were AT1 issues of Bankinter, Julius Baer and ING which offer interesting carry levels.

On the equity side, banking sector outperformed the broad market thanks to good fourth quarter results and rising interest rates. Indicative of current dynamics, UniCredit caught up the EURO STOXX 50 and Commerzbank replaced Linde in the DAX. The SX7R returned +6.21% versus +1.88% for the SXXR. About regulatory topic, the EBA published its stress test scenarios for 2023, which will include the most severe assumptions to date. In its worst-case scenario, EU GDP declines by 6% cumulatively over three years, while the unemployment rate increases by 6.1 percentage points.

Uncertainties related to central bank decisions lead us to maintain a preference for low duration positions. On the other hand, the very good results of the fourth quarter and the favourable interest rate environment for bank profitability give us confidence in the credit quality of financial issuers.

### Funds Activity

Once again, we participated in the primary market with Tatra Banka. The expected yield on this bond, rated A3 by Moody's, is about 6%. The rank of this security is "senior preferred", the lowest form of subordination. This subsidiary of the Austrian banking group RBI is a universal bank. The bad debt ratio is very low and the CET1 ratio is high (15%).

Glossary

<b>Debt subordination</b>	The general principle is that when there is not enough money to pay all the debts, the subordinated debt will be paid after the other debts.
<b>Tier 1</b>	These securities do not have priority in the event of liquidation, they do not have a maturity date, their coupon is optional and cannot be accumulated. They are the riskiest debt securities and therefore offer some of the highest returns.
<b>Legacy bonds</b>	Hybrid debt that was eligible as regulatory capital under Basel 1 or Basel 2 and that is not eligible under Basel 3.
<b>Contingent convertible (Coco)</b>	Securities that can be converted into shares under certain circumstances, usually when a solvency ratio threshold has been crossed.
<b>ITR (Implied Temperature Raise)</b>	Also known as 2 <sup>o</sup> alignment metric, is a forward-looking measure that attempts to estimate a global temperature associated with the greenhouse gas emissions of entities in a portfolio or investment strategy.
<b>ESG</b>	Refers to the Environmental, Social and Governance (ESG) criteria that enable an analysis of a company's non-financial performance.
<b>Energy transition</b>	Refers to the transition from the current energy production system, mainly based on fossil fuels, to an energy mix based largely on renewable or low carbon energies.

## Our ESG and climate approach

### Methodology

Our selection of holdings takes into account the following ESG criteria:

- **Exclusion policy** : determines the exclusions we make due to proven controversies, and sectoral or thematic restrictions.
- **ACRS - Axiom Climate Readiness Score** : Our proprietary tool devised to analyze the climate readiness and impact of issuers.
- **ESG database**: ESG performance analysis of the companies and their rating.

### Our climate approach

The fund takes into account the climate performance of banks and insurers in the following aspects

Determines the degree of priority given to climate change by the company's top management, its climate strategy and objectives, and the degree of transparency

Evaluates the processes implemented and tools used to identify, measure and mitigate exposure to climate-related risks, as well as its approach to seizing the opportunities of the energy transition.

Assesses the share of the issuer's investments and/or loans in companies or financial instruments that contribute to the transition. In the case of banks, the implied temperature increase of the corporate loan portfolio is calculated.

## ESG Key metrics

■ Axiom Obligataire ■ Investment universe

### Key metrics

	ACRS	°C	ESG
Portfolio rating	39%	2,7	44
Universe rating	42%	2,8	51
# companies in the universe	67	101	532
# of companies in the portfolio	24	36	52

The ACRS, implied temperature (°C) and ESG scores represent 29%, 44% and 63% of the fund's assets respectively (index & derivatives excluded).

### ESG average ratings

### Top 5 holdings by ACRS

Issuers	CNTY	ACRS	°C	ESG
CESKA SPORITELNA	AT	55.3%	2.5	39
MBANK	DE	52.6%	2.7	46

Source: Axiom AI based on data from S&P Market Intelligence, Iceberg datalab, internal research | The estimates presented here cannot be compared to other ESG or climate funds as they are based on a proprietary methodology developed by Axiom AI. Our methodology relies on third-party data from ESG/Climate data providers that may contain inaccurate or incomplete data. In the event of insufficient data, these providers may resort to estimates and approximations using internal methodologies that may be subjective. As we rely on this data for our investment decisions, such uncertainty can negatively impact portfolio performance.

## Main risks

**Risk of loss of capital:** the sub-funds do not offer any protection or guarantee. As a result, investors may not be able to fully recover their initial investment.

**Operational risk:** the risk of losses resulting from inadequate or failed internal processes, people, systems or external events. The occurrence of these risks may cause the net asset value of the fund to fall

**Currency risk:** as some of the assets may be denominated in currencies other than the reference currency, the sub-fund may be affected by changes in exchange controls or in the exchange rates between the reference currency and these other currencies. For this reason, the sub-fund will systematically hedge against this risk. However, a residual risk remains. These exchange rate fluctuations may cause the net asset value of the sub-fund to fall.

**Credit risk:** this risk arises from the possibility that an issuer of bonds or debt securities may not be able to honour its payment obligations, i.e. the payment of coupons and/or the repayment of capital at maturity. Such a default may result in a decrease in the net asset value of the sub-fund (including total return swaps or DPSs). This also includes the risk of a downgrade of the issuer's credit rating.

**Counterparty risk:** A sub-fund that invests in OTC derivatives may be exposed to the risk arising from the creditworthiness of its counterparties and their ability to meet the terms of such contracts. The sub-fund may enter into forward contracts, options and swaps, including CDS, or use derivative techniques, which involves the risk that the counterparty may not meet its obligations under each contract.

**Exchange rate:** Any investment in equities may involve directly or indirectly an exchange rate risk. While the net asset value of the sub-fund is calculated in its reference currency, the performance of an underlying asset or its components denominated in a currency other than the reference currency will also depend on the exchange rate of that currency. Similarly, the currency other than the reference currency in which an asset of the sub-fund is denominated implies a currency risk for the sub-fund.

**Liquidity risk:** risk arising from the difficulty or impossibility of selling securities held in the portfolio when necessary and at the price at which the portfolio is valued, due to the limited size of the market or insufficient trading volumes on the market where these securities are usually traded. The realization of this risk may result in a decrease in the net asset value of the sub-fund.

**Use of derivatives:** If a sub-fund whose performance is linked to an underlying asset frequently invests in derivatives or securities other than the underlying asset, derivative techniques will be used to link the value of the shares to the performance of the underlying asset. While the prudent use of such derivative techniques may be beneficial, derivatives also involve risks which in some cases may be greater than the risks associated with more traditional instruments. Transaction costs may be associated with the use of such derivatives.

**Climate/ESG data risk:** The Management Company's ESG integration process relies on third party data from climate/ESG data providers. Data providers may apply different models and use different sources of information, which may contain inaccurate, incomplete or unaudited data. In addition, where data is insufficient, data providers may use internal methods to produce subjective estimates and approximations. Similarly, the Management Company conducts qualitative analysis based on self-reported information, which is generally not audited by a third party. As the portfolio manager bases its investment decisions on this data, this uncertainty in data collection may have a negative impact on the performance of the portfolio.
